**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--**

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to 11/12/04.
2. ☒ The allowed claim(s) is/are 4 and 7.
3. ☒ The drawings filed on 10 November 2002 are accepted by the Examiner.
4. ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

### **REASONS FOR ALLOWANCE**

This office action is in response to an amendment filed on 11/12/04.

The following is an examiner's statement of reasons for allowance: Claims 4 and 7 are allowed as the prior art does not teach or suggest the applicant's invention. Claims 4 and 7 teach a method and apparatus for servo writing. With regards to claim 4, the distinguishing elements of the claim teach a stopper for limiting a movable range of the actuator wherein: the stopper is formed by an elastic member, an elastic deformation amount of the stopper is changed by changing force of driving the actuator under such a condition that the actuator is depressed against the stopper in order that the position of the head is adjusted and a positional dependent characteristic along a radial direction of the magnetic disk as to a reproduction output of the head is measured; and a relationship between a magnitude of drive force capable of depressing the actuator against the stopper and a position of the head along a width direction thereof is defined by that a variation of gradients is limited to 10 % within a range of two tracks of the magnetic disk. Regarding claim 7, the distinguishing elements of the claim teach a stopper for limiting a movable range of the actuator, wherein: at such a stage that a servo signal is recorded on the magnetic disk where information used to position the head has not yet been recorded, an elastic deformation amount of the stopper is changed by varying force of driving the actuator under such a condition that the actuator is depressed against the stopper so as to change a position of the head in a stepwise mode, and also to record patterns having finite lengths which are not overlapped with each other at a plurality of radial positions.
